Adapting to the Cloud

Move, Adapt, Migrate

Overview

Learn about the ongoing unplanned cost that are funded each month.

Getting to the Cloud!

With the massive shift to remote work, business data are scattered across devices and platforms. Companies have the need to adapt their file sharing strategies to ensure data protection at any point. There are several strategic options to allow and support remote production similar to the office environment.

However, here are some tips to reduce expenses and help you prepare for a cloud based workplace, with an emphasis on operational efficiencies.

1) Cloud based email

Yes, we had to add this one in.

Email is a way of life for all business. If your current email is hosted at your office or by a third party it may be time to consider migration to a mature reliable platform? Many times we find that there are additional licensing cost savings that help self-fund the migration cost.

2) Cloud network shared drives

Imagine if you could access the network shared drives anywhere you plan to work using the same drive letter. This flexibility is available today and supports applications that may have reference links to a drive mapping. This ability comes with advanced collaboration tools such as users having the ability to collaborate on documents in real time with no conflicts.

And, importantly permissions can be implement that protect HR and Financial files along with standard backup best practices.

3) Cloud delivered data intensive application

Historically applications that needed to run on the same network as the server can now consider using the cloud. The ability to work remote or to remote to the office and then starting a shadow workstation session are complicated.

We now have engineered several solutions with the ability to run data heavy applications directly from their laptops anywhere they are working the include the home office, job sites or customer offices.

And yes, everything gets backed up to support return to work policies.

4) Cloud business continuity

Many times companies that move systems and services to the cloud leave out the need to backup these services. With a few simple steps we deliver solutions that not only backup cloud services but also comply with data retention and recovery needs.

5) Cloud hybrid workforce

Collaboration technology will continue to be crucial because she believes hybrid workers will become the default in most organizations. As a result, the digital collaboration environment will inevitably become the one constant that ensures everyone is connected and up to date with progress, whether they are in the office, at home, in the field, or traveling.

“Outstanding! Already there is a clear and profound difference over what they have received in the past. Thank you so much!”
