

Proactive IT

Customers focus on core business

Overview

One of the major challenges in maintaining a computer network is trying to predict what will fail, and when.

Check List

Technology Changes Constantly?

Our solution is so effective, that our customers see almost immediate results. A regularly maintained network means fewer failures, yielding higher productivity and savings on support costs for you. At the same time, your exposure to security risks is dramatically lessened, and frustration from unstable IT resources almost vanishes.

1) Advanced Performance Monitoring

Ensures all of the critical network devices that comprise your business network are healthy and functioning reliably and optimally.

2) Scheduled Preventative Maintenance

Validates that your servers, virtual servers, shared storage, workstations, firewalls and other vital network devices function optimally and are fully patched. This improves reliability and security.

3) Network Health Monitoring

With our continuous health monitoring and alerts we dedicate time to review reports and issues that are important to the ongoing performance of your network. We translate technology into business terms for you.

4) Security Management

Utilize properly designed and implemented Anti-Virus and Anti-Spam solutions to keep your business protected.

5) Patch Management

Ensures all of your Windows servers and workstations have the most up-to-date security and system patches, helping to optimize performance and minimize security risk.
